

IoT - Exam

1. Definition, why is it an internet; what is the things

• Def = an internet of things are a network of interconnected devices with sensors, software and connectivity that exchange, process, and act on data.

• Internet = it has connectivity and is an interconnected device through network

• things = physical devices (with sensors, software, network)

2. Segments of IoT in earth surface

Underwater, aquatic terrestrial, air space

3. Why is there a need for IoT security?

- with the advancement of digitalization and IoT devices being more and more integrated to our lives, it is crucial that IoT security is there to protect our privacy, safety, and security

4. Attack on a smart house

Asset	Threat	Attack	Countermeasure	CIA Property
Security camera	Privacy leak	Cloud recording retention	No raw video to cloud	Privacy (Confidentiality)
Motion sensors	Spoofing	modify sensor behavior	Physical tamper detection on devices	Integrity
Smart lock	locked out of house	Dos via cloud	Local fallback	Availability

5.
